
Introduction

The purpose of this course is to introduce and reinforce the basic laboratory skills that analysts utilise on a daily basis and allow them to gain knowledge of important quality aspects/topics. It is essential that analysts know the basic laboratory skills, which are reflected in the performance of ILCP, ILCT, validation and reliability (consistency) of measured results.

The course consists of taught and practical elements that focus on laboratory safety, basic lab equipment maintenance and use, basic laboratory techniques, laboratory calculations, buffer preparation, and recording of experimental results. This is to build on analysts' experience of day to day work practices in a laboratory.

Who Should Attend

- Laboratory analyst and personnel
- Quality Assurance personnel
- More experienced personnel needing to update their knowledge

Objectives

Upon completion of this 2-days course, participants are expected to:

1. Learn the best practice for a range of laboratory skills;
2. Understand the basic safety requirements to work in a lab
3. Gain a basic understanding of quality issues
